

AANDERAA NEWSFLASH

Showcasing the successful MOTUS packages at Oceanology International

Newsflash 2018 - no. 2

One year after its release, Xylem brand Aanderaa® MOTUS packages have proven their ability to collect reliable meteorological and oceanographic data.

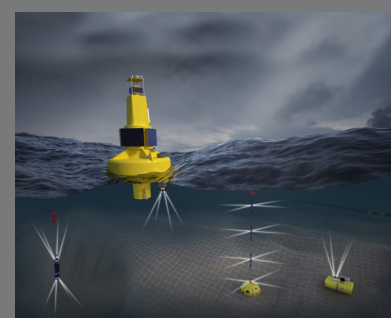

Used in extreme weather all over the world in coastal or offshore conditions, MOTUS provides accurate directional wave and current data from standard navigation or environmental buoys.

Celebrating 15 years since the launch of its first smart sensors, Aanderaa will join fellow ocean & coastal Xylem brands at **Oceanology International 2018**, booth F301 by presenting two innovations in technology seminars.

Come and learn about Aanderaa's latest developments including: evolution in the oxygen optode technology, ultraprecise stable pressure measurements, particle/turbidity detection with the SeaGuard® Doppler Current Sensor and about the new accuracy and exceptional stability of our salinity sensors.

Aanderaa will also present "recommended best practice methods" to provide end users with the tools to maintain high quality data without the need to send sensors back to the manufacturer for re-calibration; presenting not only a financial saving opportunity but also one of lesser down-time.

To learn more, visit our two presentations on **March 14, at 9:30 & 11:00 am** in the Networking Suite, room 1 at Oceanology International, 13-15 March 2018, ExCel, London; or visit the Xylem Analytics booth (F301), where you can meet experts from all our ocean & coastal brands.

For more information and questions please [contact](#) Emilie Dorgeville, Product Manager.
