

Wear kits

QUICK, CONVENIENT AND COST-EFFECTIVE DEWATERING PUMP REPAIR

- Minimize downtime with easy access to all critical parts for the most common dewatering pump repairs
- Cost less than buying individual parts
- Simplify spare parts handling
- Combine kits for extensive repair
- Wear-resistant Genuine Flygt Parts for long-lasting performance

FLYGT
a xylem brand

Wear kits KEY FEATURES

Flygt wear kits include the components that usually require replacement on the hydraulic end of a pump. Using a Flygt wear part kit together with a Flygt hydraulic repair kit provides all the parts you need for a complete repair of the hydraulic end. For a complete overhaul of the entire pump, you also need a Flygt basic repair kit, which includes mechanical seals, bearings and an O-ring kit.

Flygt wear part kits

Flygt hydraulic repair kits

Dura-Spin™ technology is included in the Flygt wear part kits. Spiral grooves on the suction cover and back vanes on the impeller prevent abrasive particles from reaching the impeller neck.

Wear kit product range

Spare part	Material
Impeller	Hard-Iron™ (HRC 60)
Suction cover	Hard-Iron™ (HRC 60) Nitrile rubber
-For 2600 series with Dura-Spin -For 2000 series	
Diffuser and O-rings	Nitrile rubber
