

Godwin HL270M Dri-Prime[®] Pump

HIGHER PRESSURE DEWATERING WITH FEWER PUMPS

A photograph of two miners walking away from the camera down a concrete-lined tunnel. They are wearing high-visibility yellow jackets, black pants, and white hard hats with headlamps. The tunnel walls are rough, grey rock. A green sign on the left wall reads '1A 100 m'.

The Godwin HL270M Dri-Prime[®] Pump dewater the deepest mines, construction sites and more.

The Problem

Today, mines require going deeper, but there aren't many robust self-priming pumps on the market that can supply the high pressure needed to dewater them effectively.

The Consequences

Using a pump that doesn't match the required duty can be detrimental and cause premature wear to essential parts, increasing downtime and costs. Operating multiple pumps in series can be complex, creating a system that is prone to downtime and higher costs.

The Solution

The Godwin HL270M Dri-Prime® Pump is designed to go far deeper than ordinary dewatering pumps while providing high-efficiency performance. Robust and reliable, the HL270M can deliver heads up to 300 meters and flows up to 280 liters per second, all while using less power and running longer between repairs. It's available in cast steel or duplex stainless steel, with mechanical or gland packed seals.

The Benefits

Increased operational efficiency

The HL270M is easier and more efficient to operate than multiple pumps in series, with fewer assets to maintain.

Maximized Uptime

It provides longer equipment life and requires less maintenance than a pump that isn't designed to meet the needs of deeper mines.

Reduced Costs

Plus, it offers substantial savings, thanks to its high-efficiency impeller and the efficiency of its hydraulic design.

The Offering

Diesel Engine

A Caterpillar C32 or Caterpillar C27 engine comes standard, creating a portable system.

Electric Motor

The HL270M will be offered with three electric motor options – 350 kW, 600 kW and 1000 kW – for a greener energy source.

Retrofit Program

Retrofitting is the smart alternative to a full-scale capital expenditure, and can be done quickly because we've eliminated the guesswork from the equation.

Xylem |'zīləm|

- 1) The tissue in plants that brings water upward from the roots;
- 2) a leading global water technology company.

We're a global team unified in a common purpose: creating advanced technology solutions to the world's water challenges. Developing new technologies that will improve the way water is used, conserved, and re-used in the future is central to our work. Our products and services move, treat, analyze, monitor and return water to the environment, in public utility, industrial, residential and commercial building services settings. Xylem also provides a leading portfolio of smart metering, network technologies and advanced analytics solutions for water, electric and gas utilities. In more than 150 countries, we have strong, long-standing relationships with customers who know us for our powerful combination of leading product brands and applications expertise with a strong focus on developing comprehensive, sustainable solutions.
