

Godwin SD150 M Dri-Prime Pump

THE COST-EFFECTIVE SOLUTION WHEN PERFORMANCE COUNTS

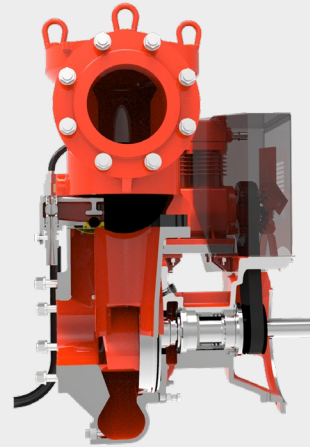

Introducing Your Dewatering Workhorse

The SD150M Dri-Prime pump is a new offering from Godwin with unprecedented value.

Now, in the most unpredictable and challenging of times, Godwin is providing certainty, introducing a new standard in dewatering pumping, with unprecedented value – the Godwin Standard Dewatering Series.

The Standard Dewatering Series is designed for harsh applications, has dry running capability for long seal life, and can automatically prime from dry to 28 feet without a need for operator intervention.

First of the series, the Godwin Dri-Prime SD150M pump is a versatile, general purpose dewatering pump designed for use in the industry's most challenging construction, municipal, industrial and emergency response applications.

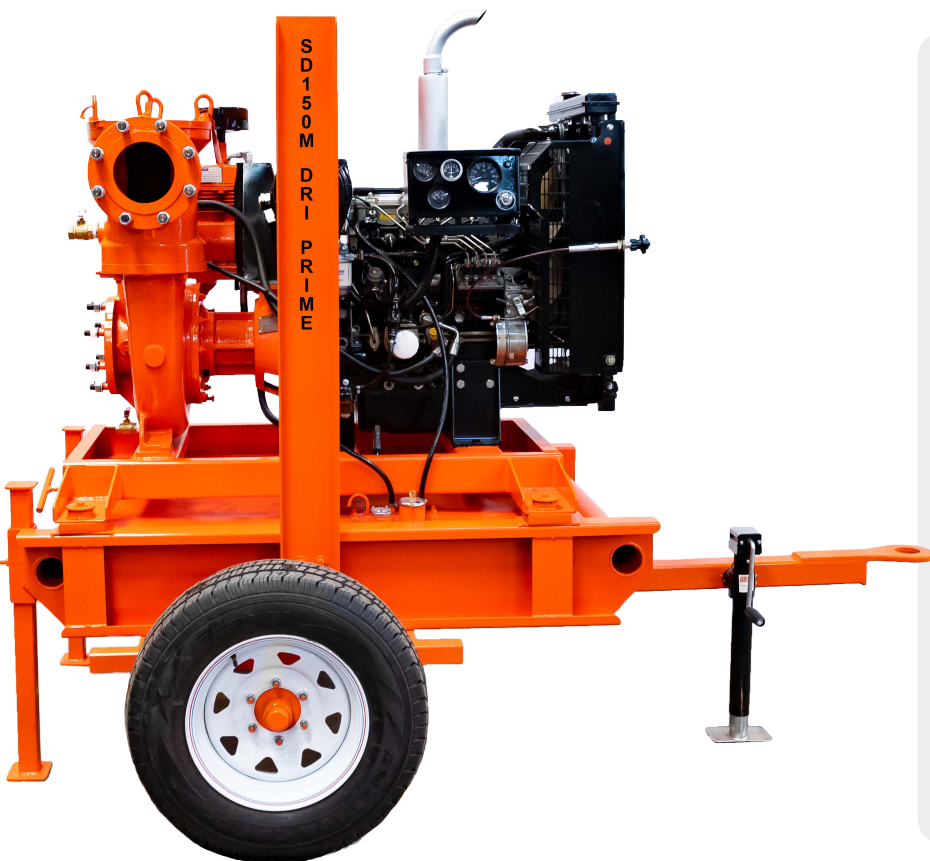

Designed to help you meet the toughest challenges:

- Flexible for clean water or solids applications
- Run-dry capability
- Fitted with cooled mechanical seal
- Robust materials of construction
- Available as skid or trailer

Dri-Prime™ Automatic Self-Priming

Seals in pumps that often run dry can overheat and fail. Godwin mechanical shaft seals run in a liquid bath, which dissipates heat through the pump casing and allows the pump to run dry indefinitely. This provides more reliable operation, and reduces downtime.

THE GODWIN QUALITY YOU'VE COME TO EXPECT

Tailored engineering features lower total cost of ownership:

- Optimized pump design allows for easy service
- Hydraulic design optimized for smaller engine size
- 20% reduced fuel consumption
- 3" solids impeller for challenging solids applications
- Modular design allows for interchangeable spare parts

A Tough, Flexible Pump That's Friendly To Your Budget

The New Value Standard in Dewatering

The new Godwin SD150M Dri-Prime Pump is your dewatering workhorse - a high flow, venturi-prime with semi-open 3" solids impeller for challenging solids-handling applications, yet flexible for clean water applications.

Built upon the same foundation as Godwin's legacy construction and dewatering pumps, a streamlined design to achieve customer value.

Streamlined to Save You Money

The SD Series pumps feature a new trimmed impeller for lower flow/head/NPSHr. This brings high performance dewatering with lower power requirements, saving on engine and fuel costs.

A simplified design uses fewer individual parts, which allows for shorter set-up time to support local jobs and requires less service efforts.

Core to our values that's good for the environment too.

Sustainable for the Long Run

Robust materials of construction backed by genuine Godwin parts and kits ensure the reliability and availability that is expected from your favorite brand.

If you want the flexibility of selecting the right tool for the job from a portfolio of competitively priced, reliable and high-quality pumps, the new Godwin SD series is the answer.

Xylem |'zīləm|

- 1) The tissue in plants that brings water upward from the roots;
- 2) a leading global water technology company.

We're a global team unified in a common purpose: creating advanced technology solutions to the world's water challenges. Developing new technologies that will improve the way water is used, conserved, and re-used in the future is central to our work. Our products and services move, treat, analyze, monitor and return water to the environment, in public utility, industrial, residential and commercial building services settings. Xylem also provides a leading portfolio of smart metering, network technologies and advanced analytics solutions for water, electric and gas utilities. In more than 150 countries, we have strong, long-standing relationships with customers who know us for our powerful combination of leading product brands and applications expertise with a strong focus on developing comprehensive, sustainable solutions.
