

Multibeam and Side Scan Training - Baltimore, MD

By Christine Roca

From June 14th – 16th, we will be holding a three-day multibeam training in Baltimore, MD. The Radisson Hotel at Cross Keys will be hosting the training and offering a special rate for accommodations.

This hands-on, classroom training is led by Joe Burnett using HYPACK® and HYSWEEP® software programs for multibeam system integration, calibration, data collection and processing using MBMAX and CUBE.

A two-day side scan course will also be held immediately following the multibeam training on June 17th and 18th.

The Side Scan Course will focus on processing techniques using HYSCAN and GEOCODER, and will cover sonar theory, side scan acquisition and targeting in HYSCAN. This hands-on class will allow students to create mosaics of different sonar datasets, including towed side scan systems and backscatter, snippet and intensity data from multibeam systems. Targeting methods and report generation using HYSCAN will be covered. Using 3DTV, the class will show how side scan data can be combined with bathymetry, and exported out to AVI's and TIF files.

The fees to attend are as follows:

To attend both the Multibeam and Side Scan Course	\$798
To attend just the Multibeam Course	\$599
To attend just the Side Scan Course	\$249

If you are interested in attending our training or if you have any questions please contact Christine at (860) 635-1500 or christine@hypack.com.
