

Export to CAD Now Exporting Line Templates

By John Marinuzzi

We recently had a few customer requests to give the **EXPORT TO CAD** program the ability to export the line templates from their line files. Well, you can now find this option in the newest version.

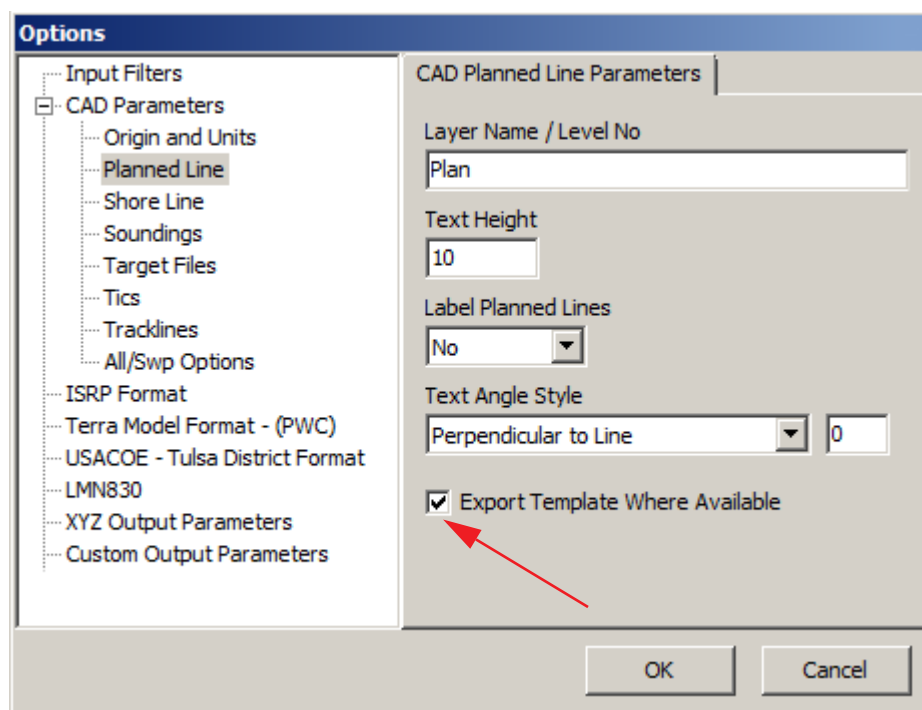

FIGURE 1. Line File in HYPACK®

To do this in the **Export To CAD** program do the following:

1. **Set the CAD or Microstation output format and name.**
2. **Click [Options]** to access the Options page.
3. **Select Planned Lines under the CAD Parameters section.** (Figure 2:)
4. **Select the “Export Template Where Available” option.**

5. **Set any other options and click [OK].**

6. **Click [Convert].**

The exported DWG file is shown in Figure 3.
