Sounding Better!

2017 Dredging Summit and Expo

By Christine Roca

HYPACK/XYLEM attended the 2017 Dredging Summit and Expo held on June 26-29, in Vancouver, BC, Canada. Annually, this conference provides a forum for those in the dredging industry to discuss a range of topics related to dredging production, navigation and safety, just to name a few. Attendees learn of new industry standards and the newest innovations in dredging technology.

HYPACK/XYLEM has remained a mainstay in the dredging industry for over 20 years by providing quality, dependable dredging solutions to companies throughout the industry. HYPACK/XYLEM was honored to be able to showcase its newest integrated buoy system and turbidity sensors. The first helps improve navigation safety for workers, while the other helps maintain the integrity of environmentally fragile dredging sites. These examples attest to HYPACK/XYLEM commitment to continually strive to meet the needs of our dredging customers who rely so heavily on our systems to get the job done.

We would like to congratulate all the award winners this year and especially thank the Association for giving HYPACK/XYLEM the honorable distinction of Best Booth at the Dredging Summit & Expo 2017. We look forward to seeing everyone at the Dredging Summit & Expo 2018 in Norfolk, VA.
