

# Support for S7K Files in SBMAX64

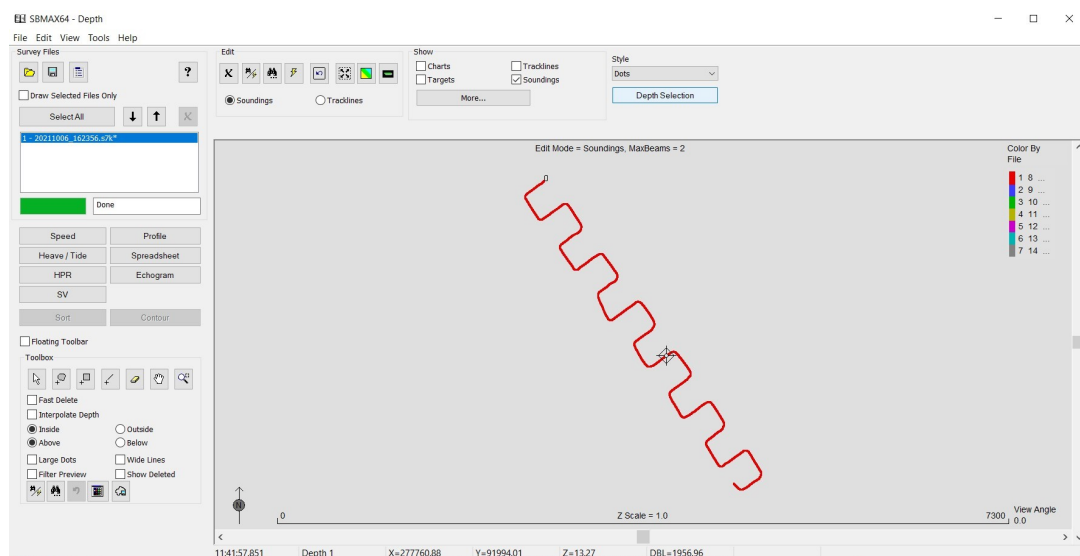

By Jocelyn Kane

SBMAX64 is now capable of loading .S7K files directly, as opposed to previously needing a .RAW file and accompanying .BIN file to display the same data. Loading of the files has not changed, just click File -> Load Survey or the Load Survey Icon on the editor bar and navigate to the file you would like to open. If your survey has multiple files they can all be loaded together.

*Figure 1: Soundings from .S7K File, Numeric Display*

*Figure 2: Soundings from .S7K File, Dot Display*

Once your .S7K file has been loaded you have all the capabilities of other file types supported in SBMAX64. View the soundings in numeric or dot form, edit them, or open the spreadsheet and profile windows where you can edit the data as well. Perhaps most importantly, you can view the echogram of the data. Select which file you would like to see the echogram of and click the Echogram window, then adjust the view to suit your needs.
