The HYPACK® Certification Exam

By Cali DeCastro

Put your HYPACK expertise to the test! The long-awaited HYPACK Certification Exam is finally ready for our users. This article contains some important information about becoming HYPACK Certified.

How the HYPACK Certification process works:

- Access the exam using this link: [HYPACK General Certification Exam](#).
- Take it at your convenience. The exam is open-book and you have an unlimited number of attempts, but please don't share your answers with (or accept help from) others.
- If you obtain a passing score of 80% or higher, you will be awarded a HYPACK General Certification.
- Once additional modules become available (Single Beam, Multibeam, DREDGEPACK®, etc.) and you've passed the HYPACK General Certification Exam, you will be eligible to take the exams for each focused module at your request, and become certified in any module for which you obtain a passing score.
- Certifications are considered current for up to 3 years from the date you pass the exam, at which point you'll need to renew your certification (a lot of changes can happen in the software in 3 years!)

For study material, we recommend consulting the most recent HYPACK User Manual, the [HYPACK Support YouTube Channel](#), and the software itself (many of the answers may be in front of you!) Be aware that the exam is designed to evaluate your basic understanding of surveying and your ability to navigate the software and utilize the resources available to you, as opposed to expecting you to memorize information or know the features of the software by heart.

If you have feedback on the exam or have any issues accessing or completing it, please email training@hypack.com.

BEST OF LUCK!
