

AN130

Flow sensor now available with updated body

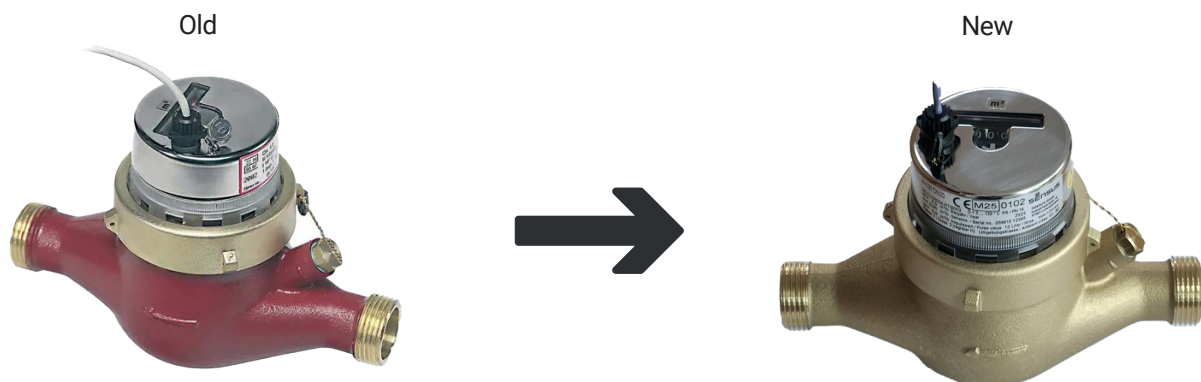

Improvement of our heat meter flow sensor AN130

Thermal energy flow sensor body will no longer be painted

As part of our commitment to environmental sustainability, we are implementing an improvement to our thermal energy flow sensor AN130. Moving forward, the AN130 flow sensor body will no longer be painted red, it will retain to its original brass finish.

Key benefits of this change are:

- **Eco-Friendliness:** Eliminating paint reduces the environmental impact by minimizing the use of chemicals and waste.
- **Sustainability:** This change supports our efforts to make our products more sustainable and use resources more efficiently.
- **Faster Delivery:** Removing this process shortens production, ensuring better delivery.
- **No impact on quality:** The removal of paint does not affect the durability, functionality or the overall quality of the flow sensor.
- **No metrological impact:** The metrological performance of the AN130 remains unchanged, ensuring continued accuracy and reliability.
